WPEN 950 AM STEREO

March 7, 1995

Mr. Phil Greenspan
101 Forge Lane
Marshfield, Massachusetts 02050

Dear Mr. Greenspan:

I am pleased to confirm your reception of WPEN on February 5th, 1995 from approximately 12:22am to 12:25am Eastern Standard Time.

For your information, WPEN transmits in Motorola C-QUAM AM Stereo with a Harris SX-5A solid state transmitter adjusted for a nighttime transmitter output power of 5400 watts, loaded into an antenna phasor/three-tower nighttime directional antenna array. Common point antenna current is 10.39 amperes. Each tower is approximately 240 feet tall, and the directional pattern is maintained to protect a co-channel station in Detroit, Michigan.

Thank you very much for your report, and I hope you'll continue to listen to WPEN whenever conditions permit.

Sincerely,

Larry Paulausky
